

## PROFICIENCY TESTING PROGRAM

### AGGREGATES

#### Company Background

Proficiency Testing Australia (PTA) is one of Australia's largest and most experienced proficiency testing providers. We have a reputation for providing friendly, customer-focussed service using qualified, experienced staff and specialists.

PTA is able to service a very broad range of industries, and many of our clients come to use our services based on the recommendation of colleagues. PTA has offices in Sydney and Brisbane, so our services and support are readily accessible.

PTA is accredited as a Proficiency Testing Provider by International Accreditation New Zealand (IANZ). The accreditation covers the specific proficiency testing programs listed on the agreed scope of accreditation. The accreditation meets the requirements of ISO/IEC 17043:2010 *Conformity assessment – general requirements for proficiency testing*.

#### Aim of the Program

The purpose of this proficiency program is to assess laboratories' ability to competently perform the tests examined in accordance with the AS 1141 series of standards; and to provide laboratories with additional external quality assurance and thus improve overall performance.

#### Application of program to accreditation

Participation in proficiency testing programs would satisfy requirements of ISO/IEC 17025:2005 *General requirements for competence of testing and calibration laboratories*.

#### Program Details

The Aggregates program is a biannual program, i.e. consisting of two rounds per year.

Participating laboratories will be supplied one bucket of 20 mm graded blend of aggregate, and the following tests may be performed on each sample: Dry Strength at Nominated Load, Flakiness Index, Average Least Dimension, Particle Size Distribution, Particle Shape by Proportional Caliper, Particle Density on a Saturated-Surface-Dry Basis, Apparent Particle Density, Particle Density on a Dry Basis and Water Absorption.

The main aim of the program is to assess the competence of laboratories to undertake this testing. Statistical outliers are identified using a robust z-score technique to detect excessively large variations between the individual laboratory and the overall consensus values.

A final report, summarising the information submitted by all of the participants can be viewed on the PTA website at the conclusion of each round of the program. An individual summary sheet is also sent to each participant at the conclusion of the program. This summary sheet details the performance of that laboratory in the program.

### **Confidentiality**

Each participating laboratory is assigned a code number to allow for confidential treatment of results in all reports and publications produced by PTA. Please refer to the PTA website (<http://www.pta.asn.au/index.php/programs/confidentiality>) for more information.

### **Fees**

Please contact PTA for information on fees for this program.
